

ISO23001 Business Continuity

ISO23001 is a rapidly emerging standard the expected take-up of certification within the supply chain will mean that companies will need to implement Business Continuity plans much quicker than expected or else face losing business to their competitors.

The business world has become increasingly aware of the need for business continuity following a number of natural disasters and the ever-present threat of terrorism.

Recent flooding incidents have focused minds that the supply chain needs to have disaster planning and plans in place to prevent long-term disruption to supply of goods and services.

ISO23001 provides the framework to undertake risk assessment and implement contingency plans to reduce or eliminate mass disruption to business. Whether the disaster be caused by fire, flood or even terrorism.

We have experienced consultants who have been involved in Business Continuity Management for several years and have worked with some large organisations to achieve effective management of risk including assisting well-known Certification Bodies gain UKAS approval for certification.

We can help to develop and implement a structured Business Continuity Management System to help minimise risk and so the chance of disruption to your organisation.

Over services:

- Gap analysis
- Provide guidance in business continuity
- Perform risk assessment to identify risks and control measures
- Develop policies, procedures and plans to minimise disruption to your business
- Assist with the external certification process
- Provide on-going support

The certification Bodies logo should be accompanied by the crown and tick to confirm UKAS accreditation.

RKMS have over 20 years experience in risk and compliance other services include, business improvement/lean management, environmental health & safety support and ISO standards implementation
